

Please replace paragraph [0031] with the following rewritten paragraph:

[0031] For a poly α -olefin, use was made of a PAO, with which various sulfonate based anticorrosives were mixed in a vessel in the proportions shown in Table 1, and mixtures thus obtained were homogenized, thereby obtaining anticorrosive lubricant compositions.

Please replace the paragraph beginning on page 14, line 11, and ending on page 14, line 18, with the following rewritten paragraph:

Thus, it has been confirmed that as is evident from Tables 1 and 2, the testpieces made of plastics, treated with the respective anticorrosive lubricant compositions for molded plastic products, according to the invention, are capable of checking the occurrence of cracks to a large extent in comparison with the testpieces made of plastics, treated with the conventional anticorrosive lubricant compositions for molded plastic products.

IN THE CLAIMS

Please amend Claims 1-6 as follows.

1. (Amended) An anticorrosive lubricant oil composition for molded plastic products, containing 100 parts by weight of a synthetic hydrocarbon oil having a kinematic viscosity of 10 to 500 mm²/s at 40°C, and 0.1 to 10 parts by weight of a corrosion prevention additive.

2. (Amended) An anticorrosive lubricant oil composition for molded plastic products according to Claim 1, wherein said synthetic hydrocarbon oil is a poly α -olefin.

3. (Twice Amended) An anticorrosive lubricant oil composition for molded plastic products according to Claim 1,

wherein said poly α -olefin is at least one member selected from the group consisting of oligomers of decene-1.

4. (Twice Amended) An anticorrosive lubricant oil composition for molded plastic products according to Claim 1, wherein said corrosion prevention additive is a sulfonate based anticorrosive.

5. (Twice Amended) An anticorrosive lubricant oil composition for molded plastic products according to Claim 4, wherein said sulfonate based anticorrosive is at least one member selected from the group consisting of Li-sulfonate, Ba-sulfonate, Ca-sulfonate, and Zn-sulfonate.

6. (Twice Amended) Molded plastic products to which said anticorrosive lubricant oil composition for molded plastic products according to Claim 1 is applied, and which is composed of at least one resin selected from the group consisting of polycarbonate resins, ABS resins, polystyrene resins, and polycarbonate-ABS resins.

Please add new Claims 8-10 as follows.

8. (New) The anticorrosive lubricant oil composition of Claim 1, wherein said oil composition consists essentially of the synthetic hydrocarbon oil and the corrosion prevention additive.

9. (New) The anticorrosive lubricant oil composition of Claim 8, wherein said synthetic hydrocarbon oil is at least one member selected from the group consisting of oligomers of decene-1 and said corrosion prevention additive is a sulfonate based anticorrosive.
